- Mountain bio and env diversity
- Diversity of climate change
- Ecosystem impacts
- Diversity of adaptation
- Mountain futures

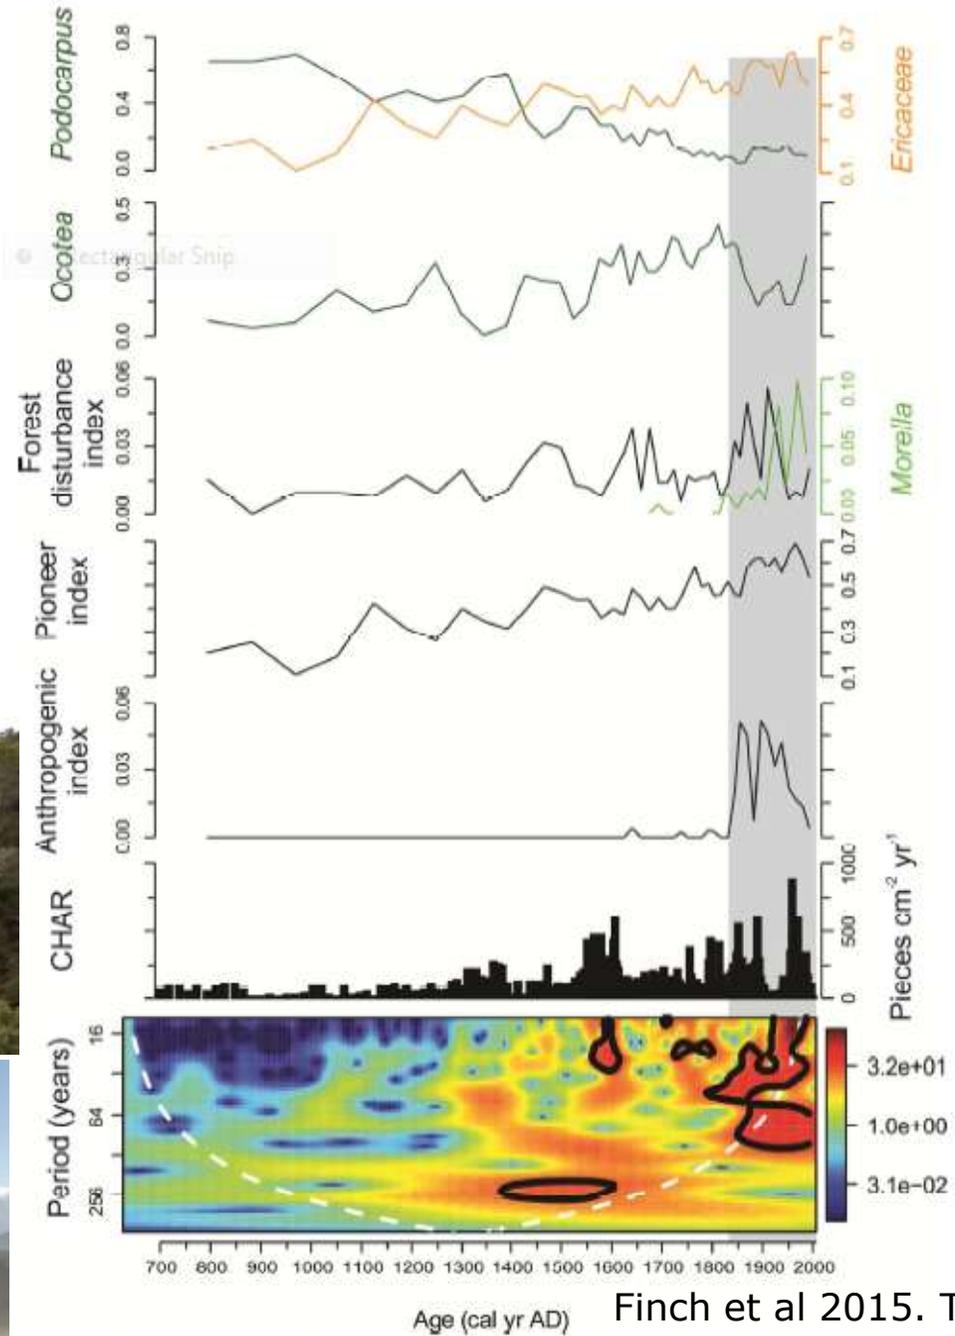

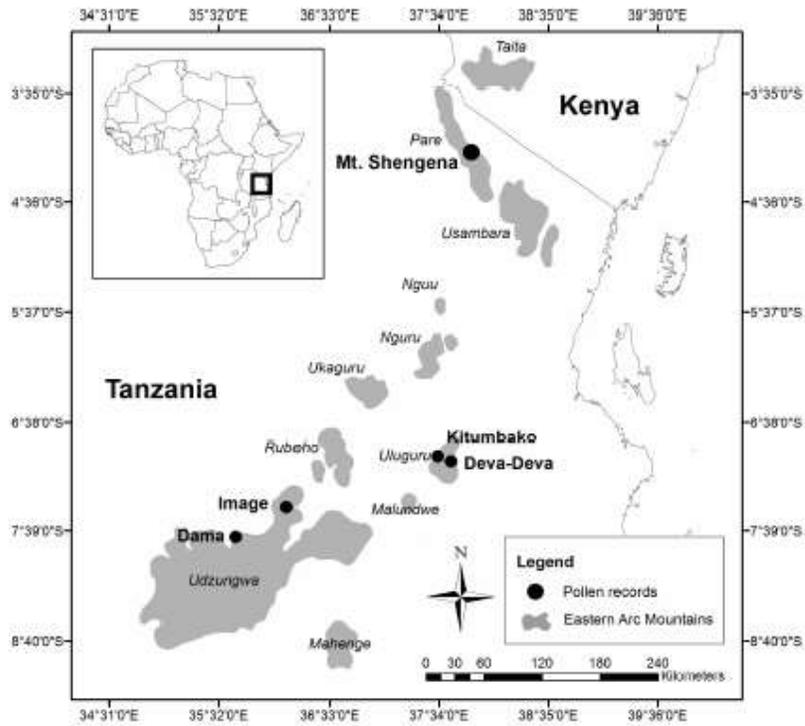

The global pattern of vertebrate richness (birds, mammals, and amphibians) for all land areas (both lowland and highland), super imposed on a hill-shade map showing topographic relief (Rahbek et al., 2019b).

Perrigo et al., 2020 Nature.

Platts et al., 2016 Diversity and Distributions

Increasing human modifications with recent pervasive change.

Colonial forest officers cleared large *Ocotea usambarensis*

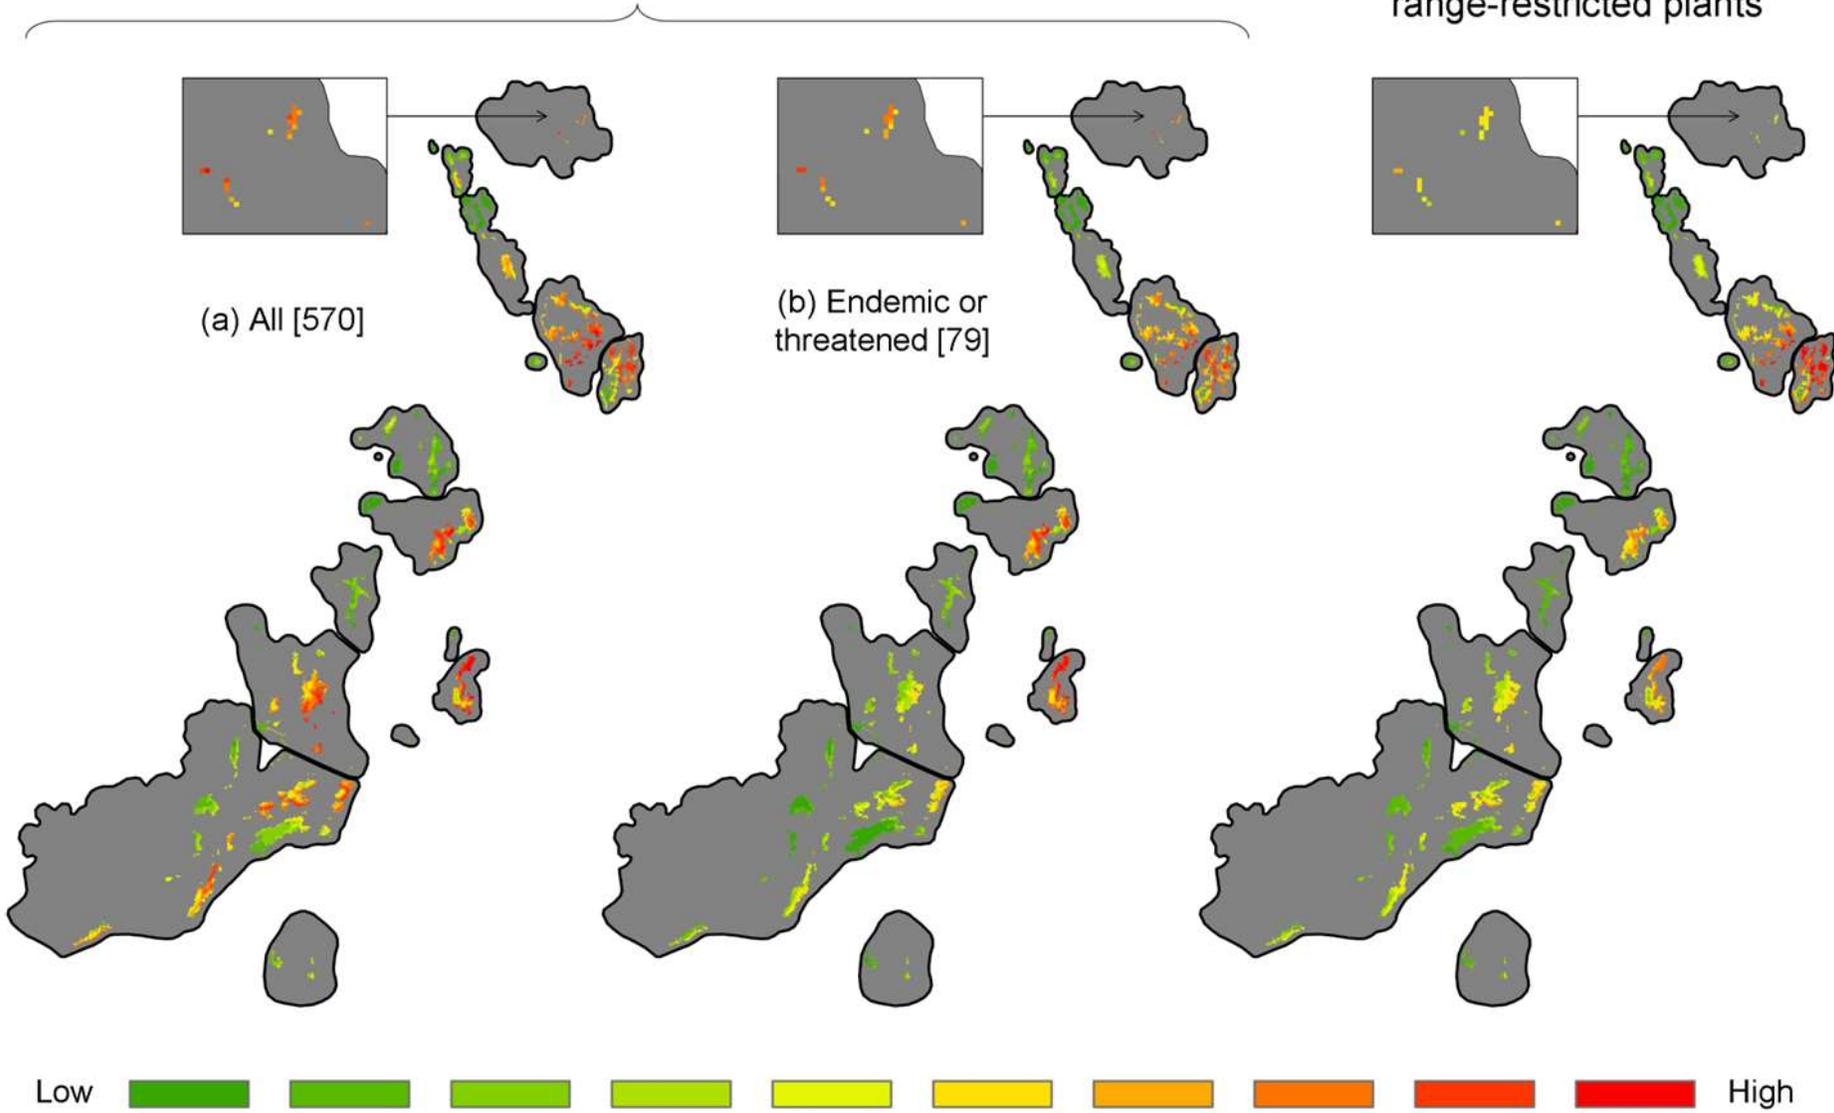

Plantation of exotics – *Eucalyptus*, Pine, *Acacia*

Arrival of *Zea* maize at 1810AD

(a, b) Species richness

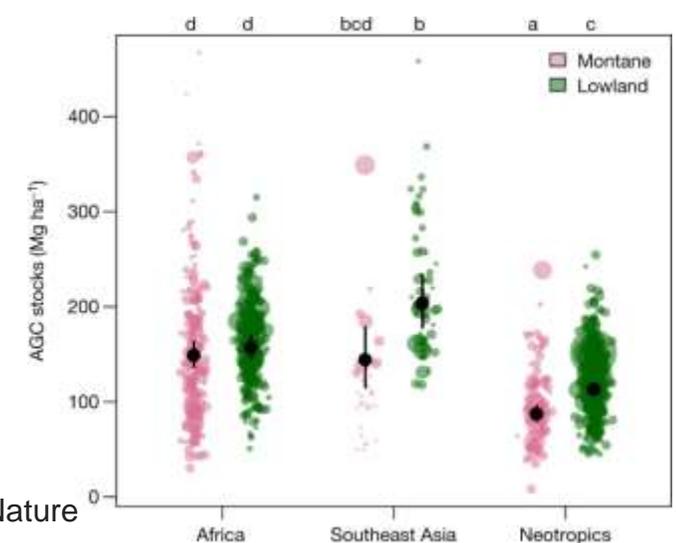

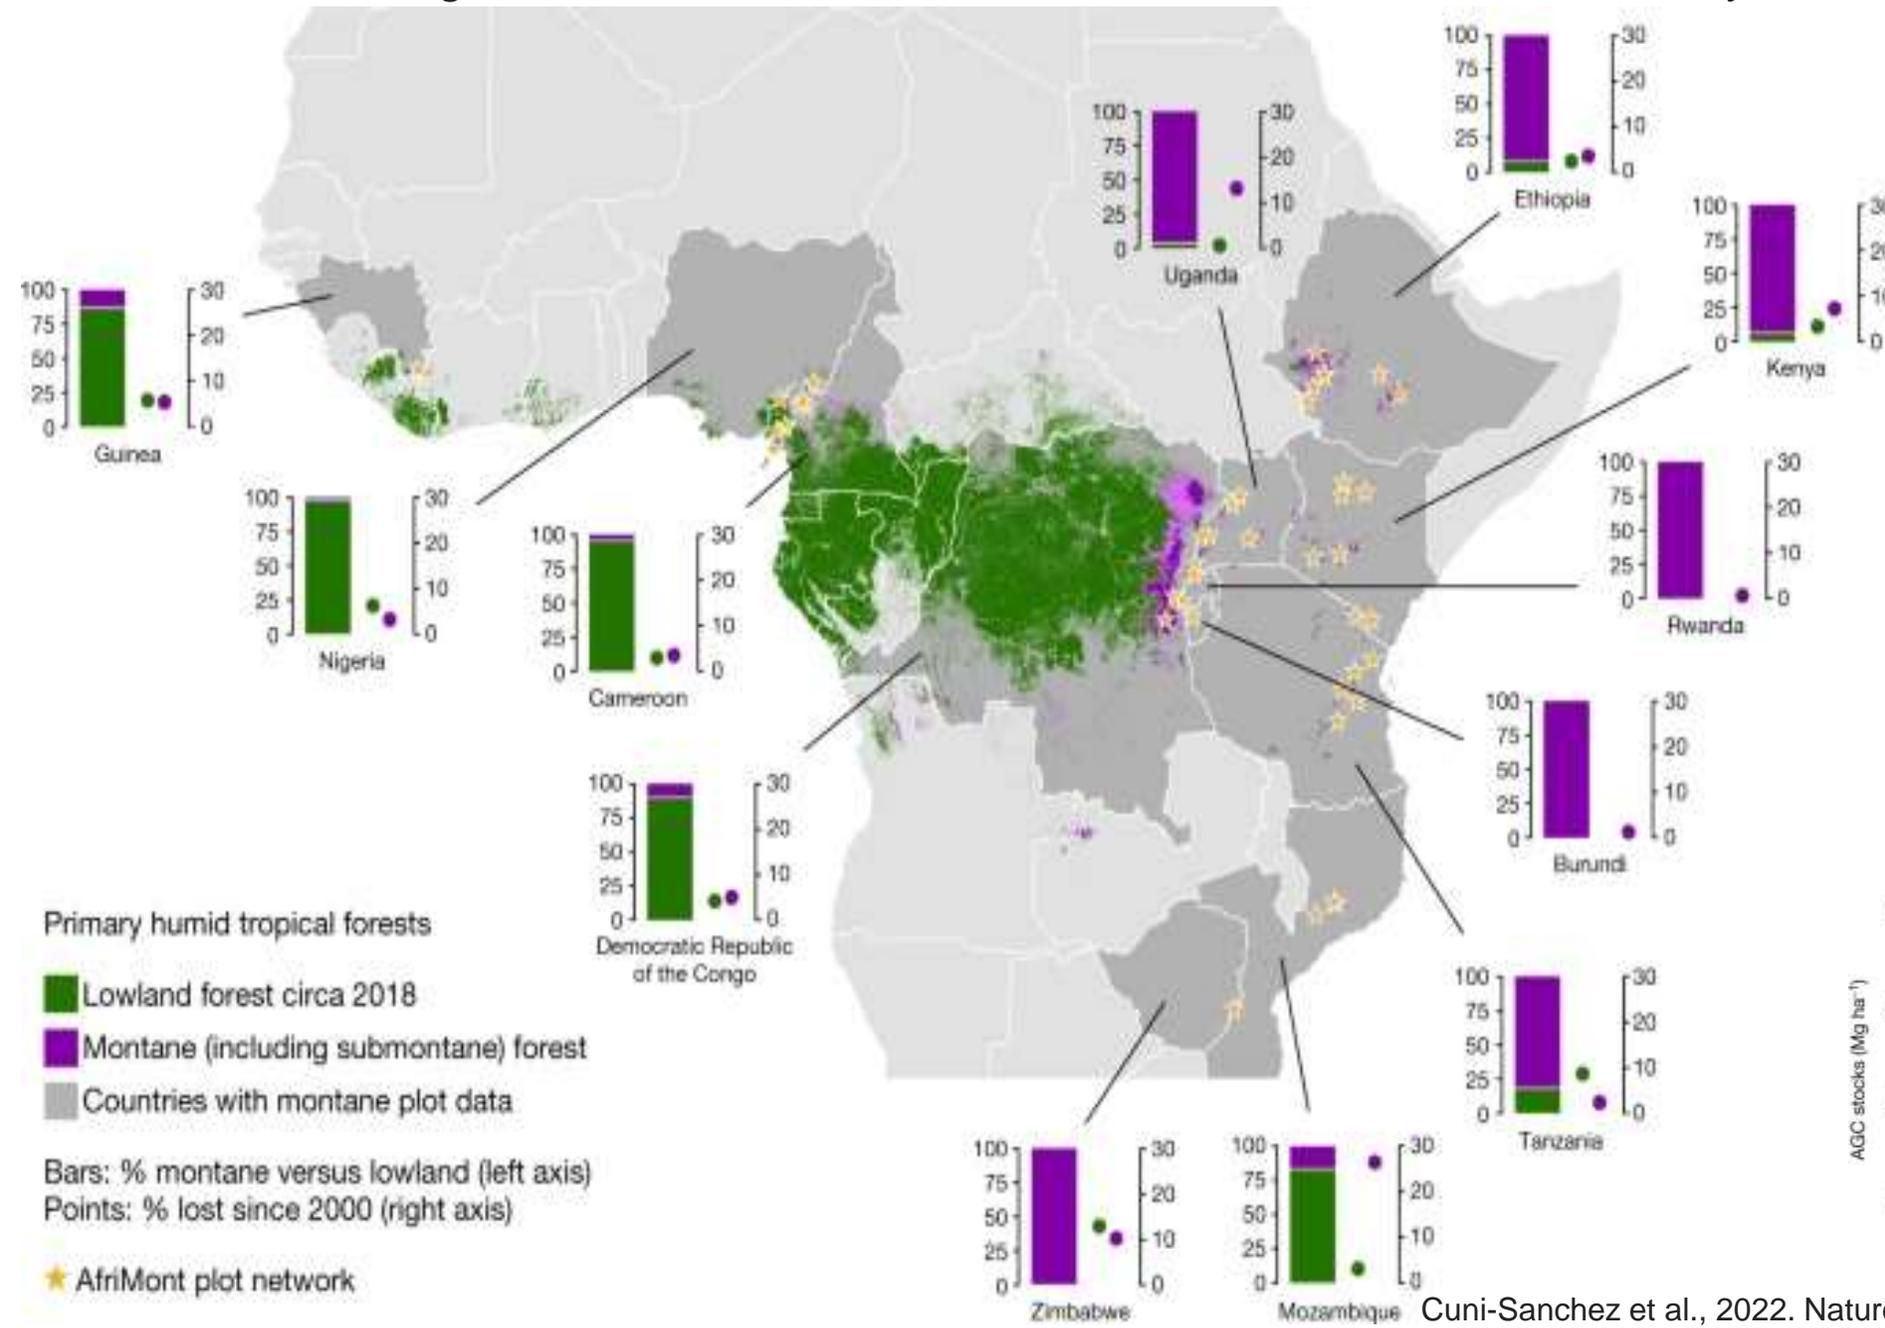

(c) Concentration of range-restricted plants

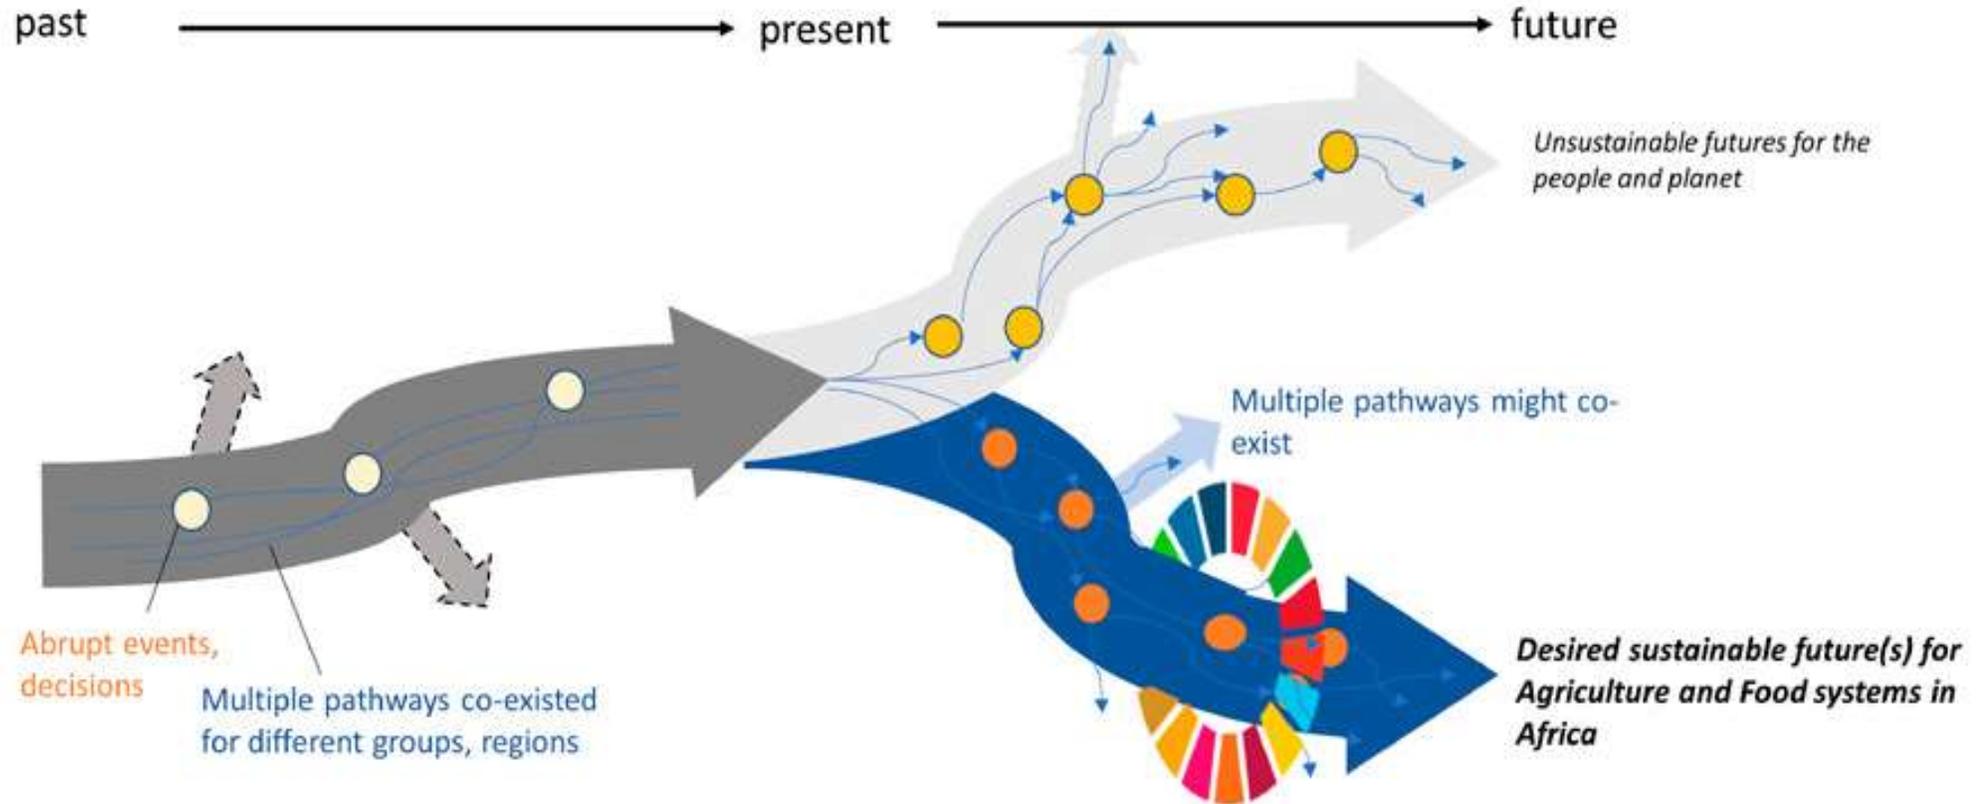

Map of the Eastern Arc Mountains in Tanzania / Kenya showing the original extent (grey outline) and the current forest area (colour) where areas of high diversity / endemism are documented for 700 species of trees.

There is an urgent need to conserve these biodiverse and carbon-rich ecosystems.

Desirable Pathways into a dynamic future?

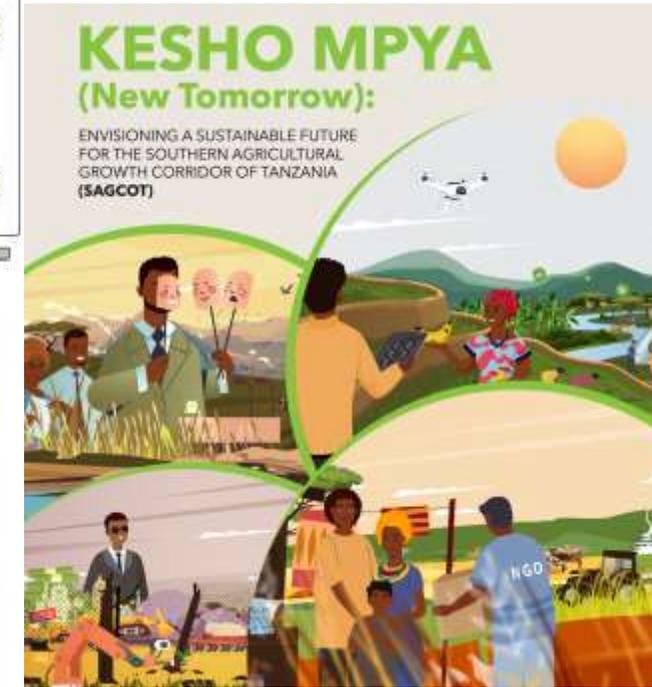

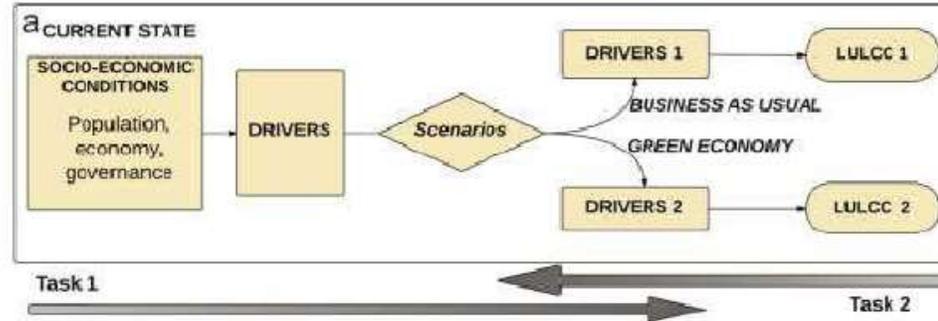

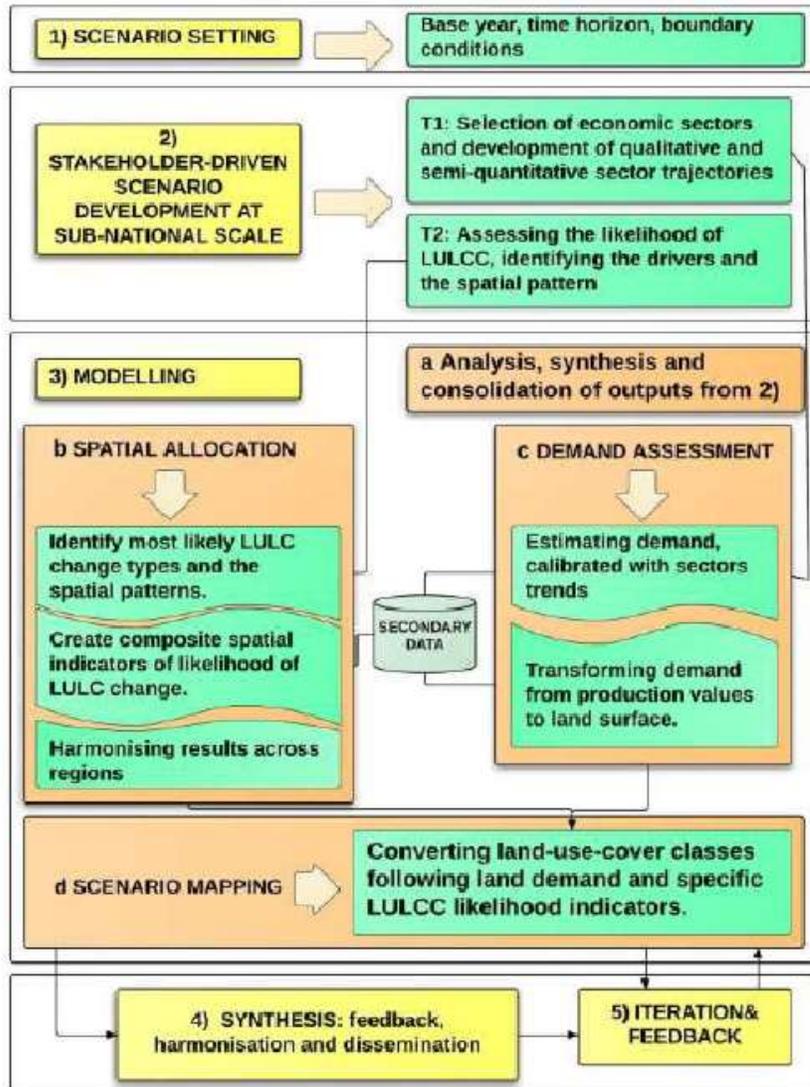

Backbone necessary actions to all pathways to the desired futures of agriculture in Africa (Table 1)

Empowerment (youth, women and population)
Partnerships for change
Knowledge, technology and data sharing

Decision points /branching points in alternative pathways related to (Table 2)

Urbanization: rate and quality
 Population growth as a problem or opportunity
 Agricultural intensification approach
 Actors in agriculture: future of small farmers, cooperatives and role of the States
 Alternative diets: meat free or diversified
 Local to global production and markets

KESHO: a participatory scenario modelling tool

Capitani et al. 2016. From local scenarios to national maps: a participatory framework for envisioning the future of Tanzania. *Ecology and Society* 21(3):4

SUSTAINABLE DEVELOPMENT GOALS

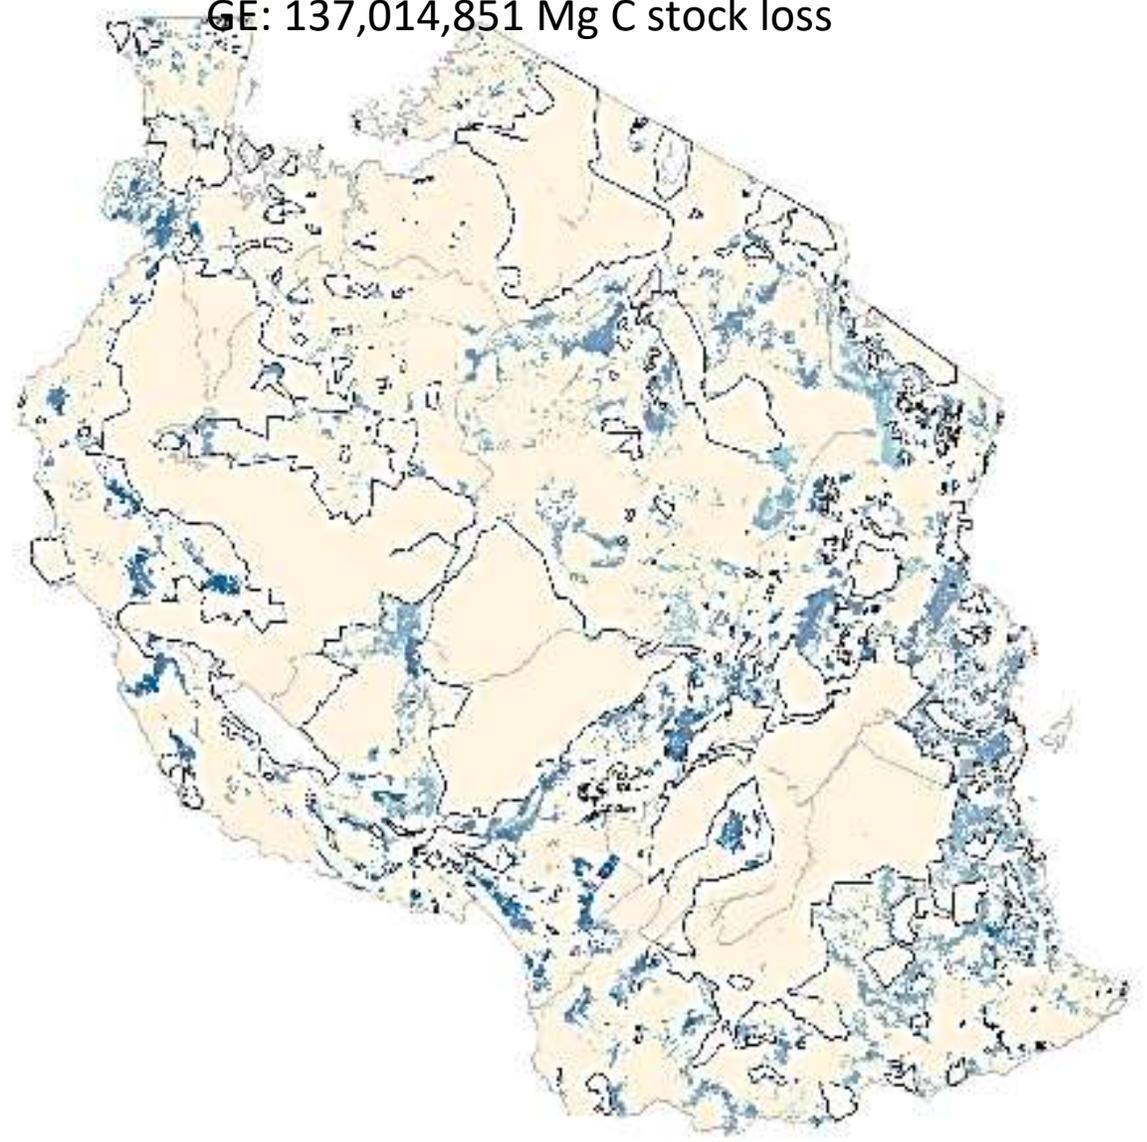

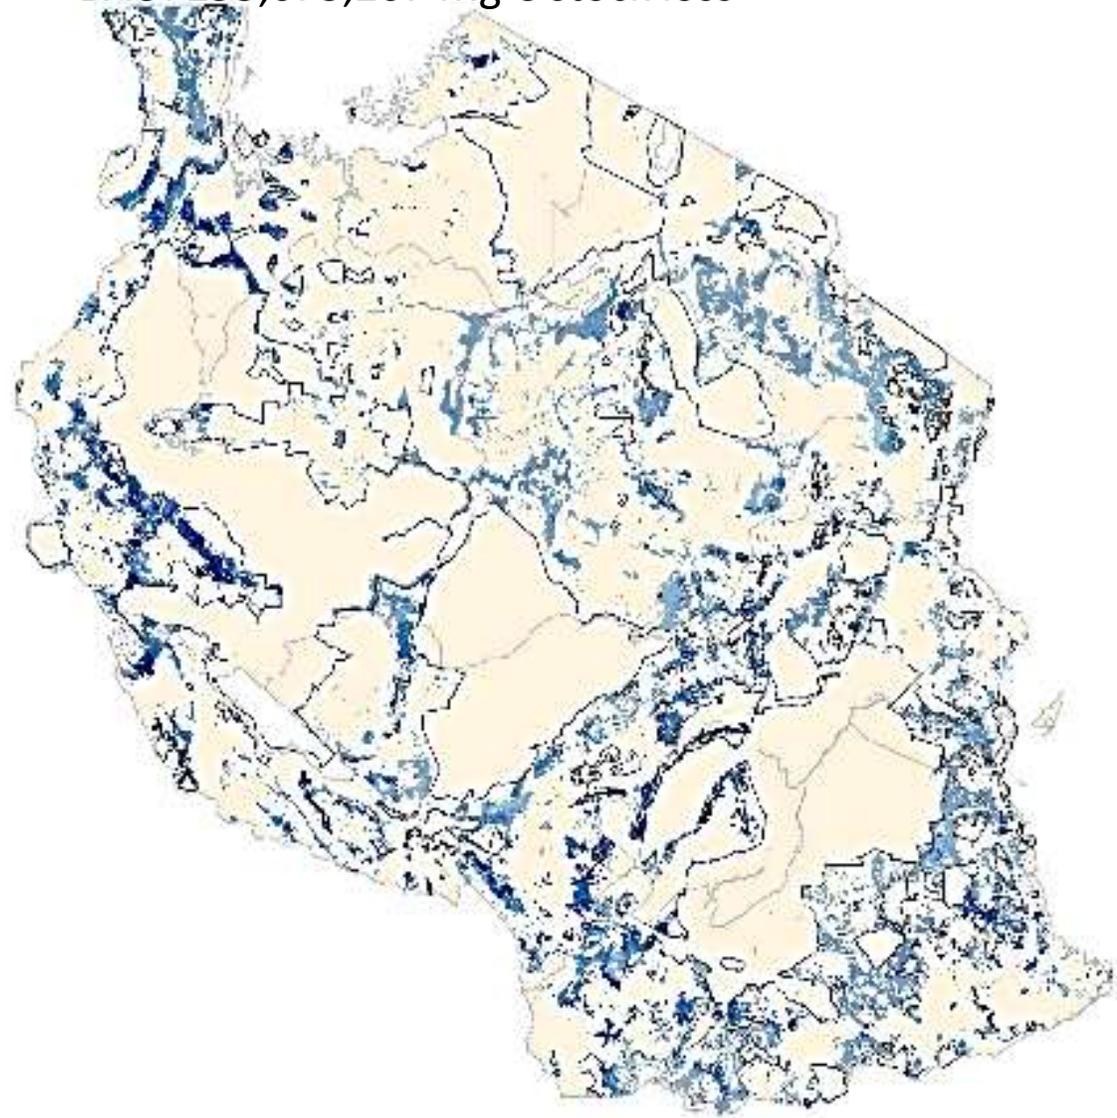

GOAL	TARGET	INDICATOR
13 CLIMATE ACTION 	13.2 INTEGRATE CLIMATE CHANGE MEASURES INTO STRATEGIES AND PLANNING 	ACTIONS TAKEN TO COMBAT CLIMATE CHANGE AND ITS IMPACTS 
15 LIFE ON LAND 	15.1 BY 2020, ENSURE CONSERVATION, RESTORATION AND SUSTAINABLE USE OF TERRESTRIAL ECOSYSTEMS ARE ALIGNED WITH INTERNATIONAL AGREEMENTS 	15.1.1 FOREST AREA AS A PROPORTION OF TOTAL LAND AREA 
2 ZERO HUNGER 	2.4 ENSURE SUSTAINABLE AGRICULTURAL PRODUCTION SYSTEMS AND PRACTICES THAT MAINTAIN THE INTEGRITY OF THE ENVIRONMENT 	2.4.1 PROPORTION OF AGRICULTURAL AREA UNDER PRODUCTIVE AND SUSTAINABLE AGRICULTURAL PRACTICES IN RURAL AREAS, IN PARTICULAR AREAS AT RISK OF DEGRADATION, SUCH AS DROUGHT-PRONE AREAS, MOUNTAINOUS, RIVER BANKS AND FORESTS 

AU AGENDA 2063

ASPIRATION	GOAL	PRIORITY AREAS AND TARGET	INDICATOR
1 A PROSPEROUS AFRICA, BASED ON INCLUSIVE GROWTH AND SUSTAINABLE DEVELOPMENT 	7 ENVIRONMENTALLY SUSTAINABLE AND CLIMATE-RESILIENT ECONOMIES AND COMMUNITIES 	1.7.4 LOW-CARBON PRODUCTION SYSTEMS ARE IN PLACE 	1. CLIMATE SMART AGRICULTURAL PRACTICES BY 2025 2. REDUCE TO ZERO EMISSION ARISING FROM BIODIVERSITY LOSS, DEFORESTATION AND LAND DEGRADATION 
	6 MODERN AGRICULTURE FOR INCREASED PRODUCTION/PRODUCTIVITY 	1.1.2 BIODIVERSITY CONSERVED AND USED SUSTAINABLY 	2. REDUCE AND CONSERVE BY AT LEAST 90% LOSS OF BIODIVERSITY AND ALL NATURAL HABITATS 
	1.1 INCREASED AGRICULTURAL PRODUCTION 	3. 10% OF AGRICULTURAL GDP IS CONTRIBUTED BY COMMERCIAL AGRICULTURAL PRODUCERS 	3. 10% OF AGRICULTURAL GDP IS CONTRIBUTED BY COMMERCIAL AGRICULTURAL PRODUCERS 

BAU: 295,673,267 Mg C stock loss

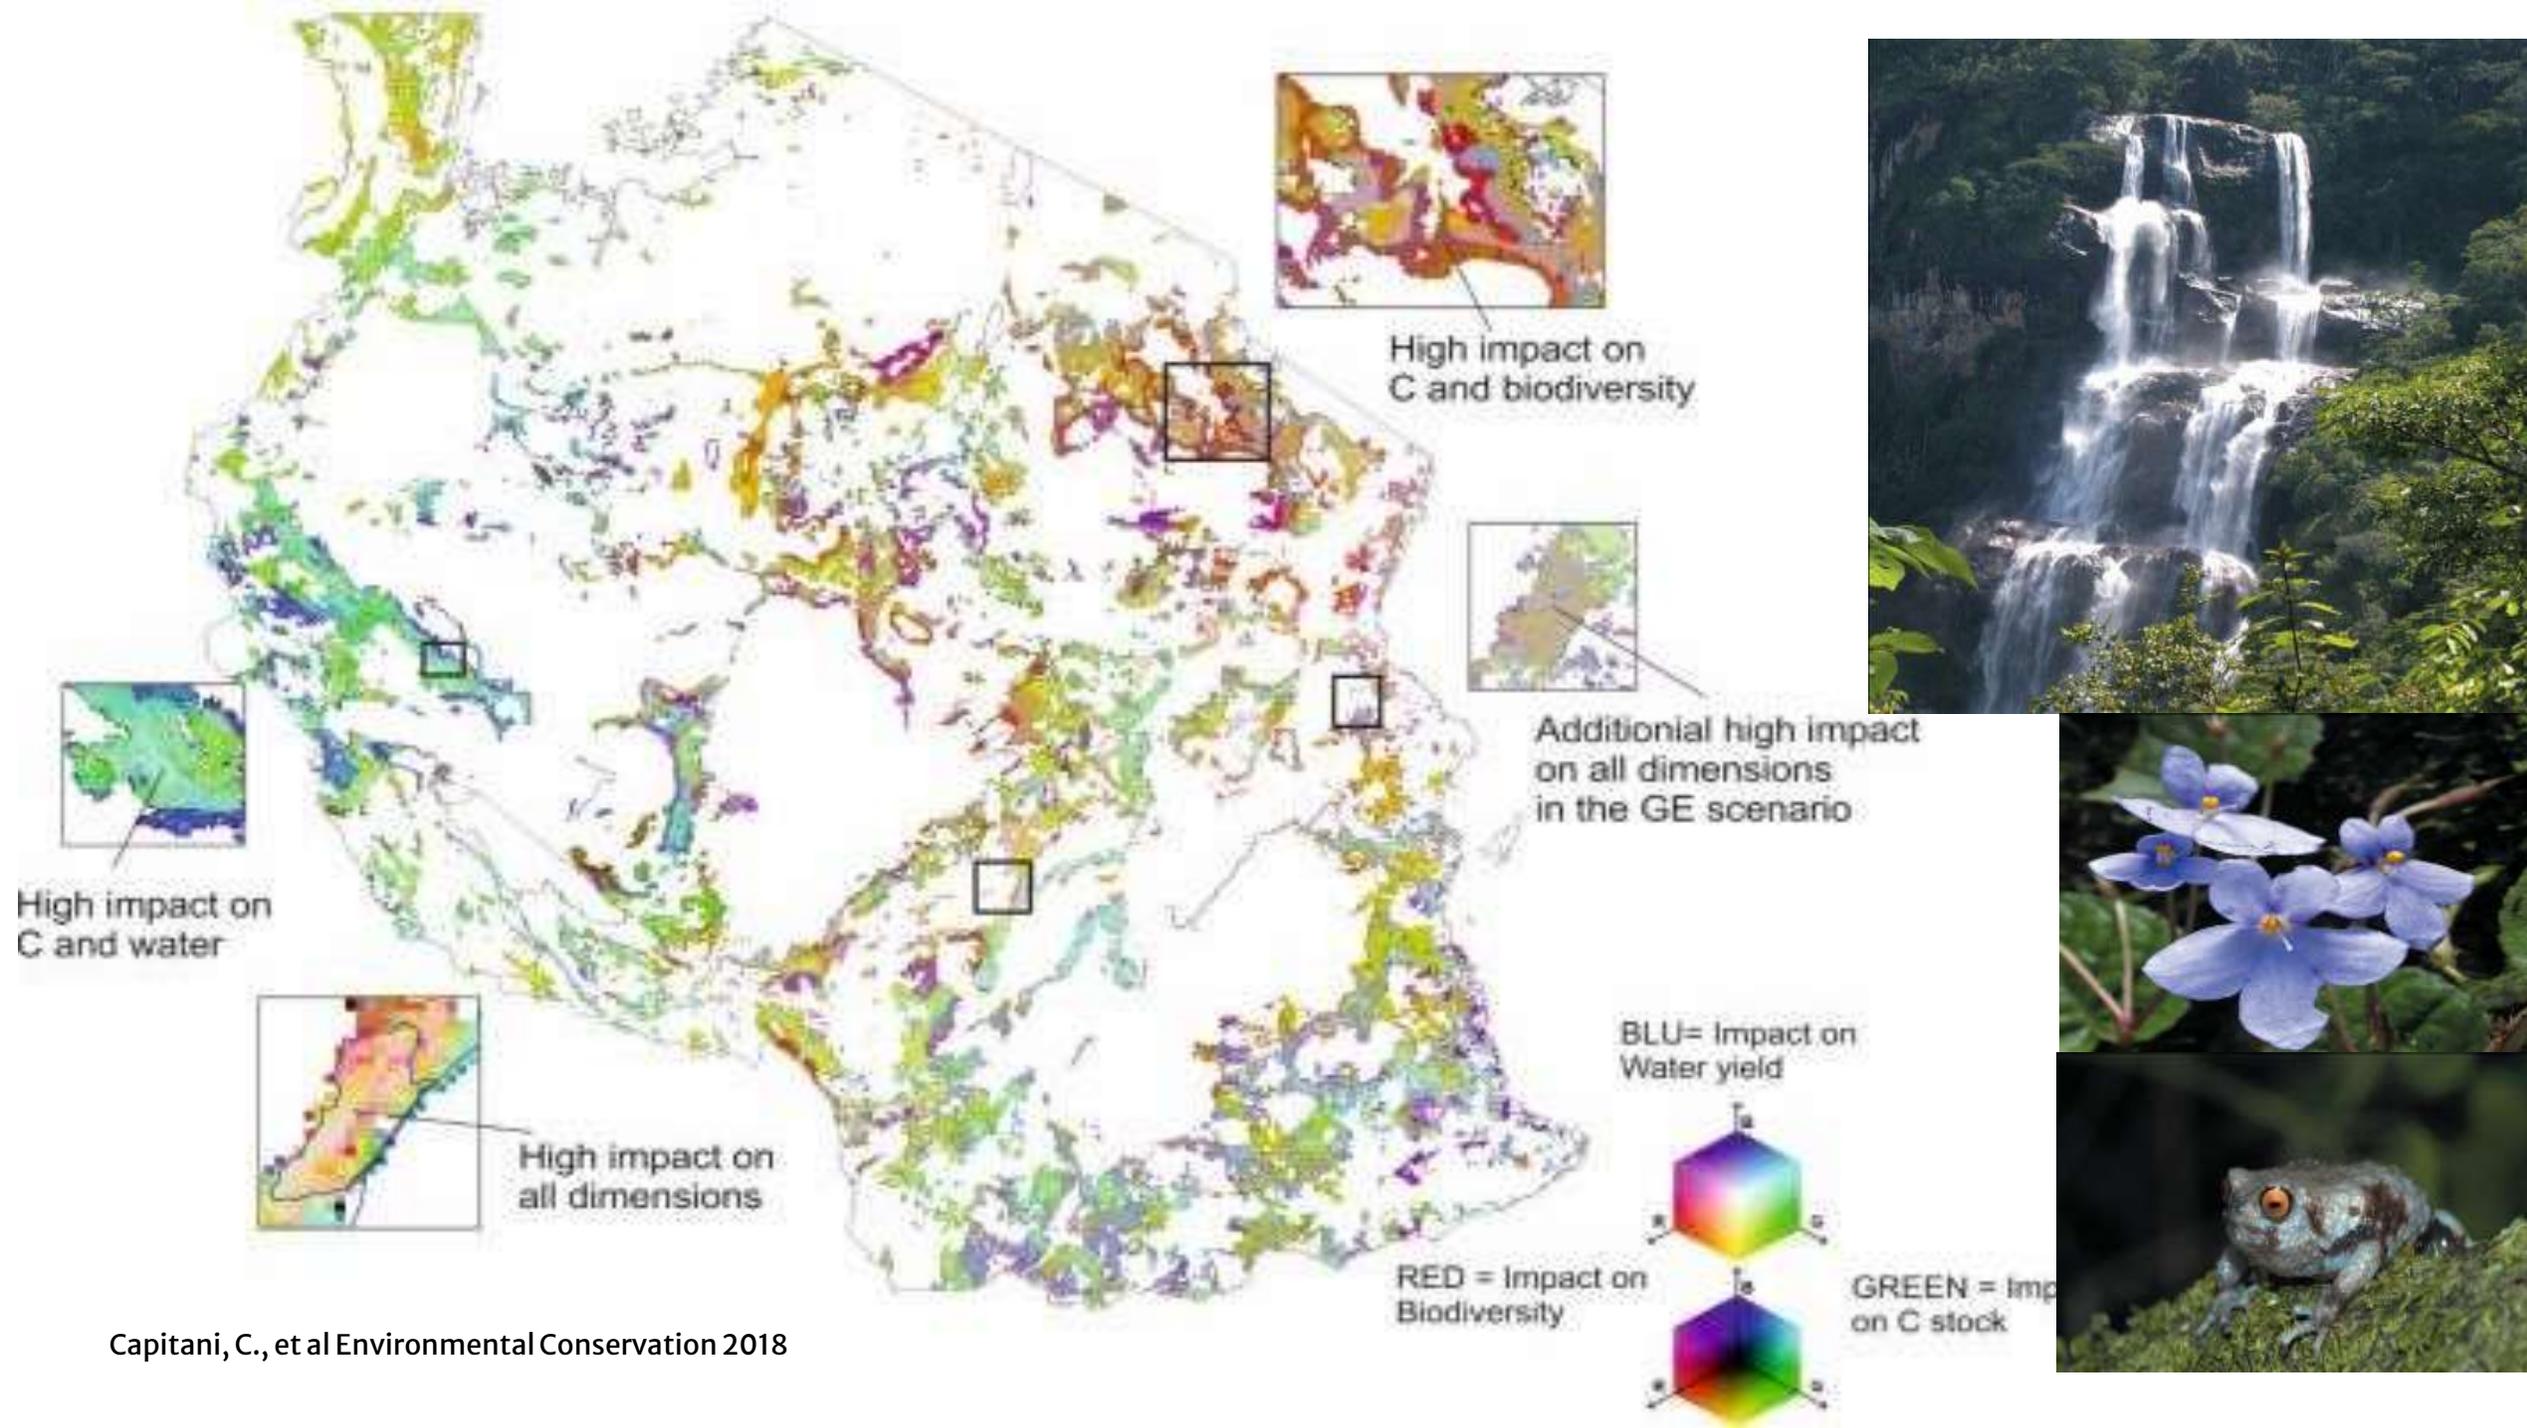

GE: 137,014,851 Mg C stock loss

Total C stock change

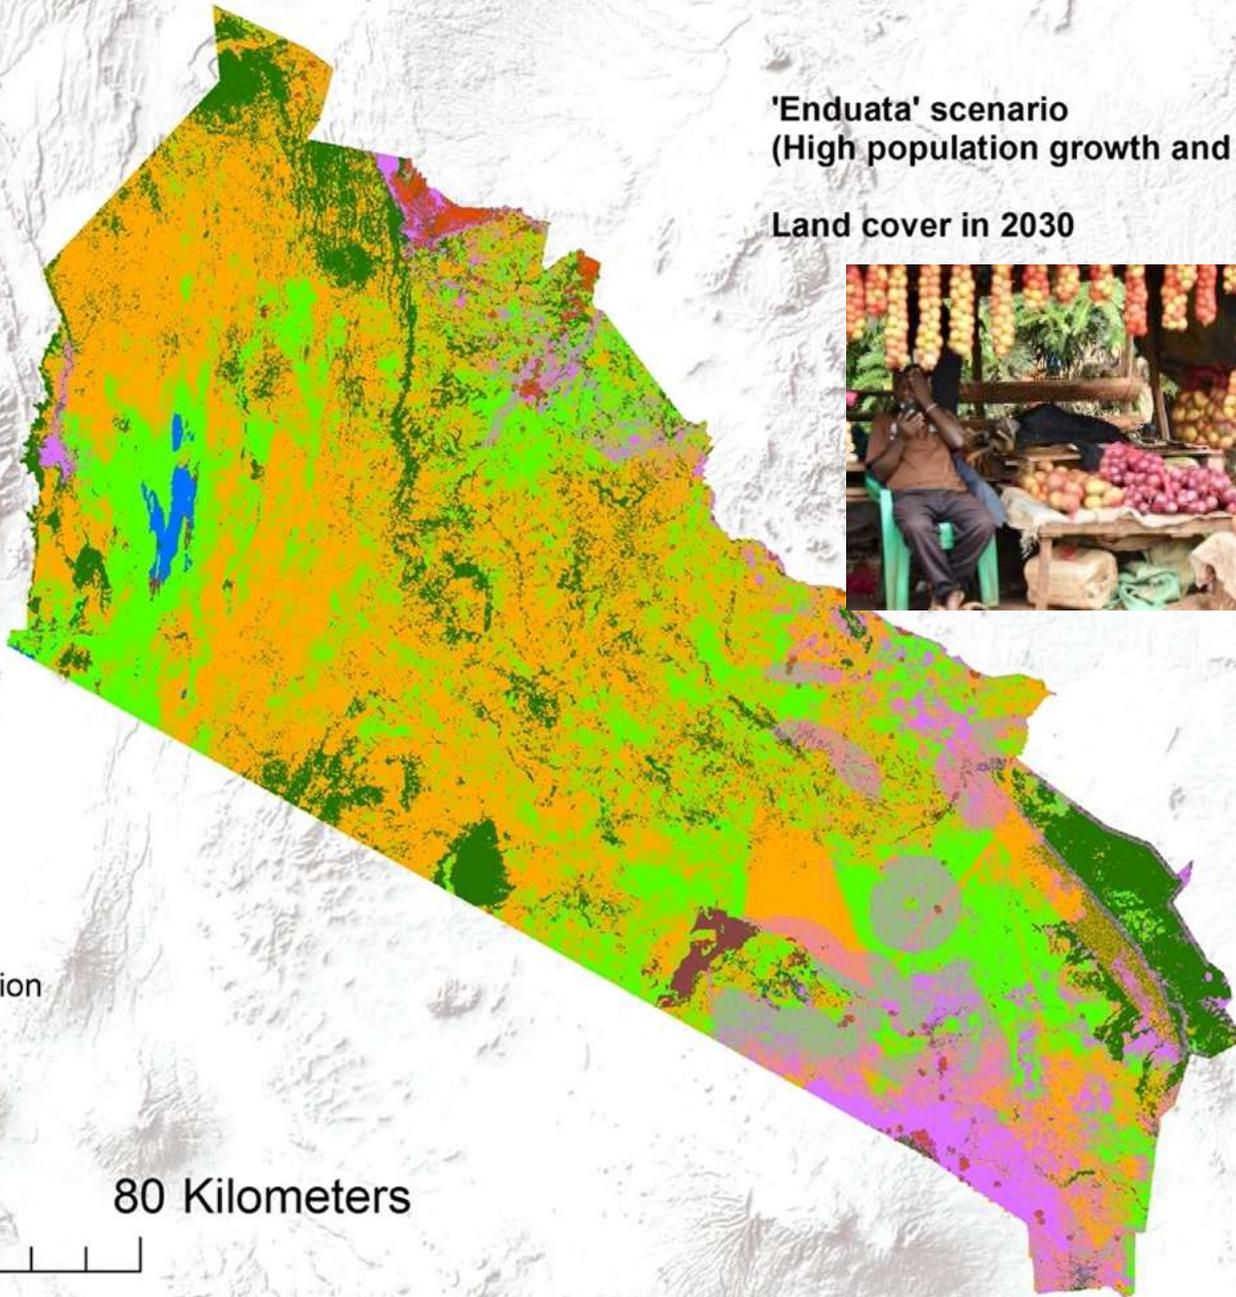

High : 1082.85
Low : 0

**'Enduata' scenario
(High population growth and low tourism economy)**

Land cover in 2030

Land cover

- Shrubland
- Grassland
- Cropland
- Built-Up
- Sparse vegetation
- Water
- Forest

0 20 40 80 Kilometers

Kariuki et al, in prep

'Enduata' scenario
(High population growth and low tourism economy)

Land cover in 2063

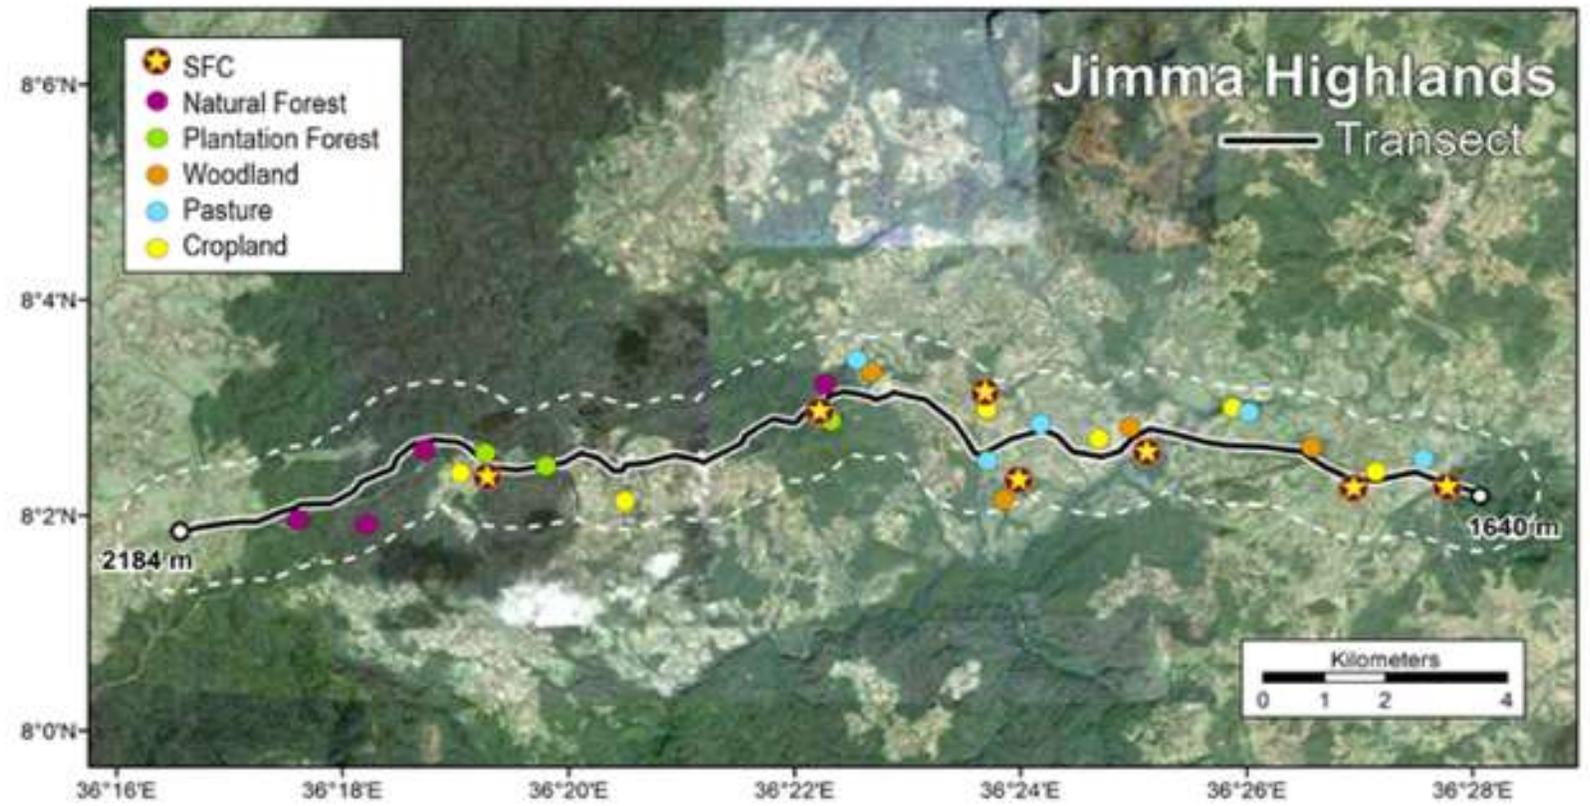

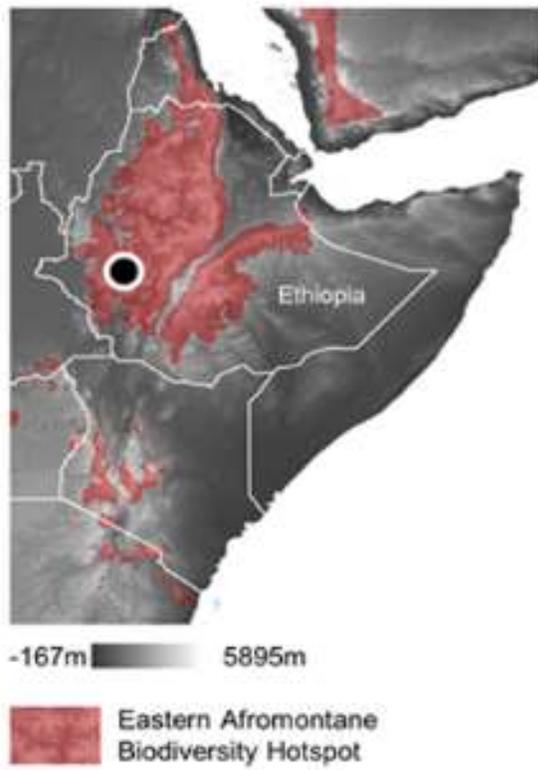

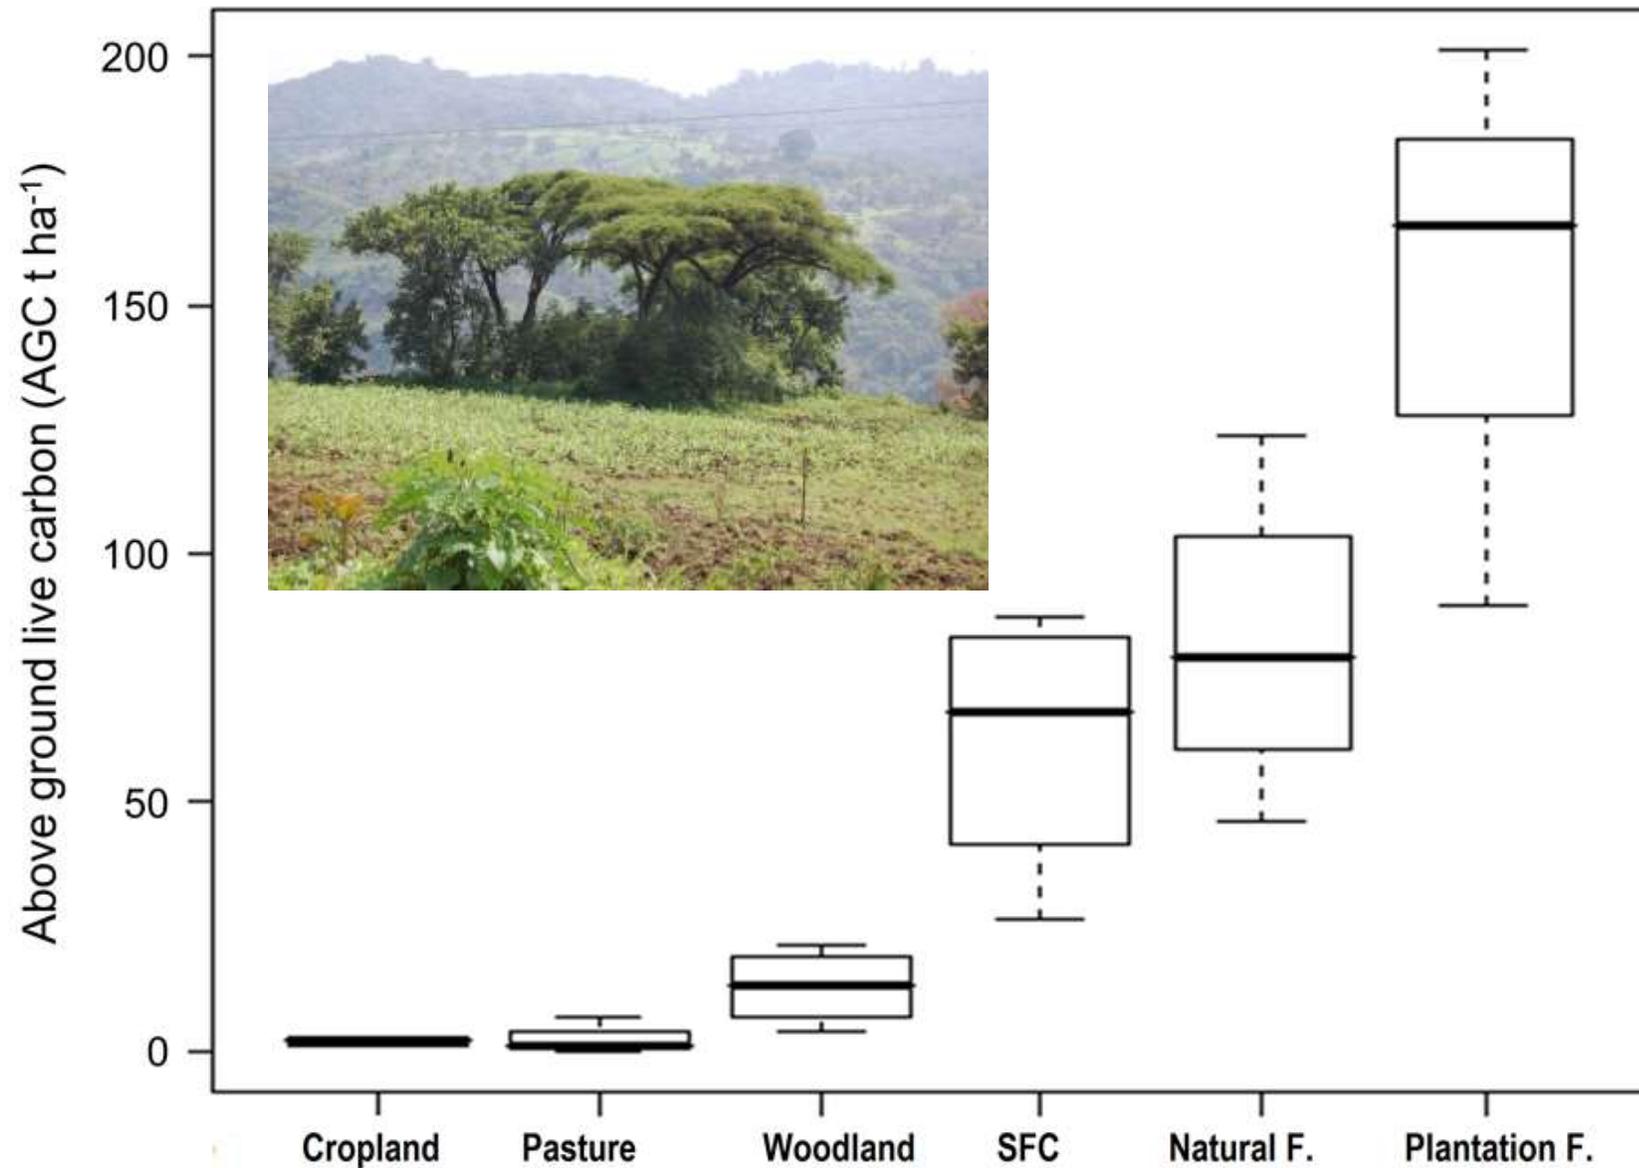

Land cover

- Shrubland
- Grassland
- Cropland
- Built-Up
- Sparse vegetation
- Water
- Forest

0 20 40 80 Kilometers

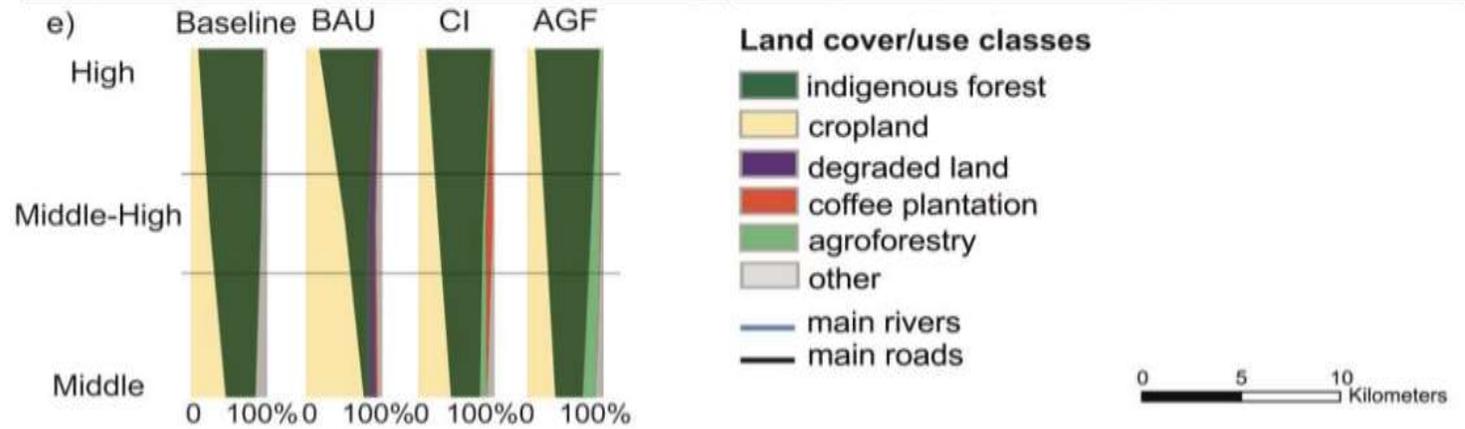

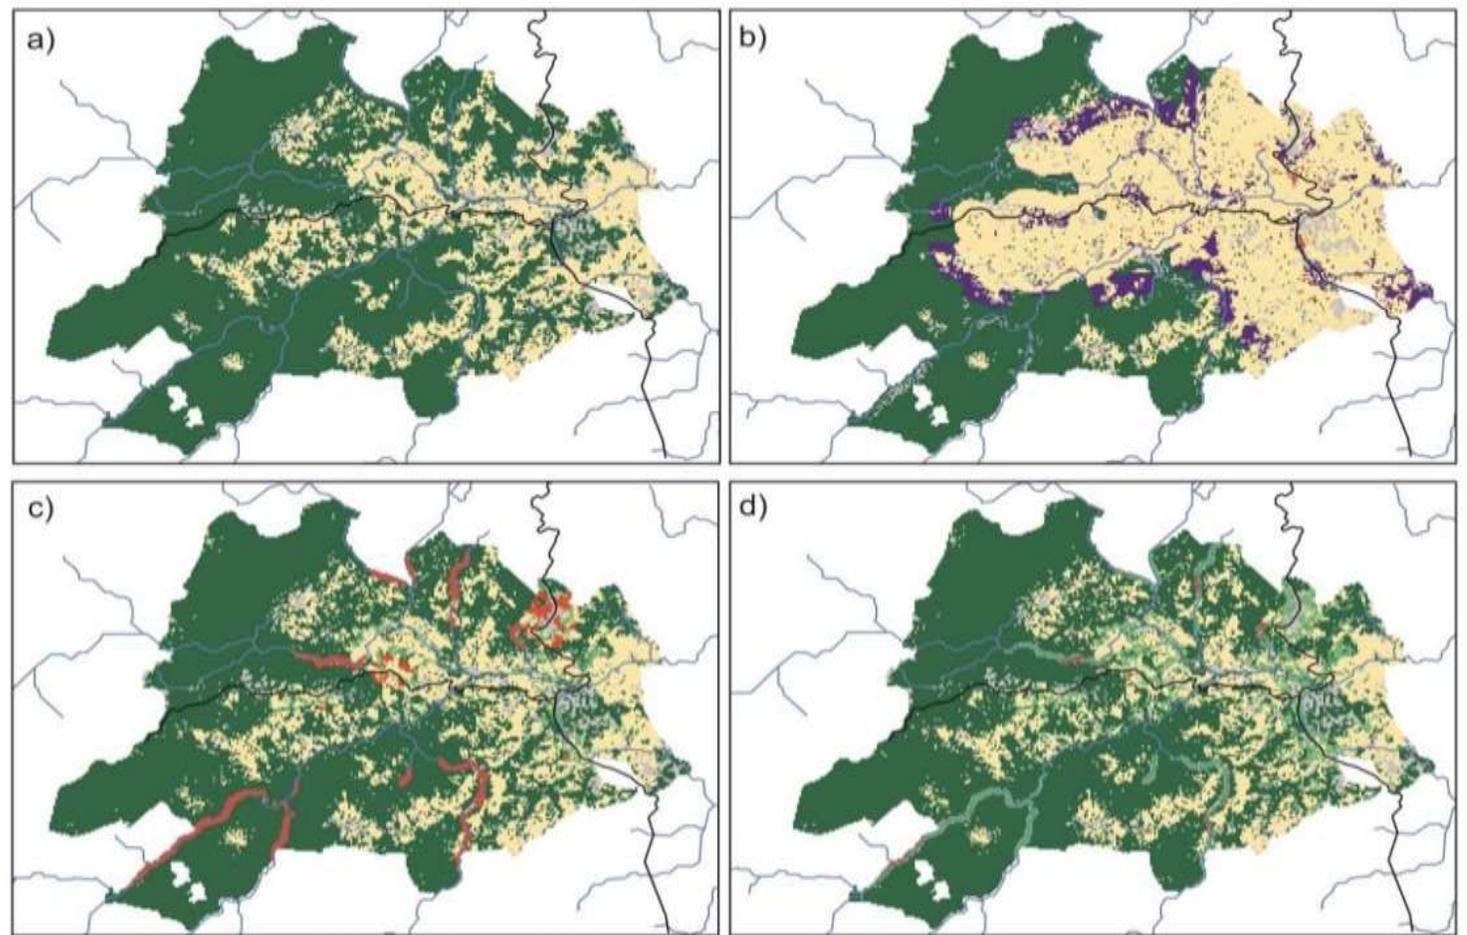

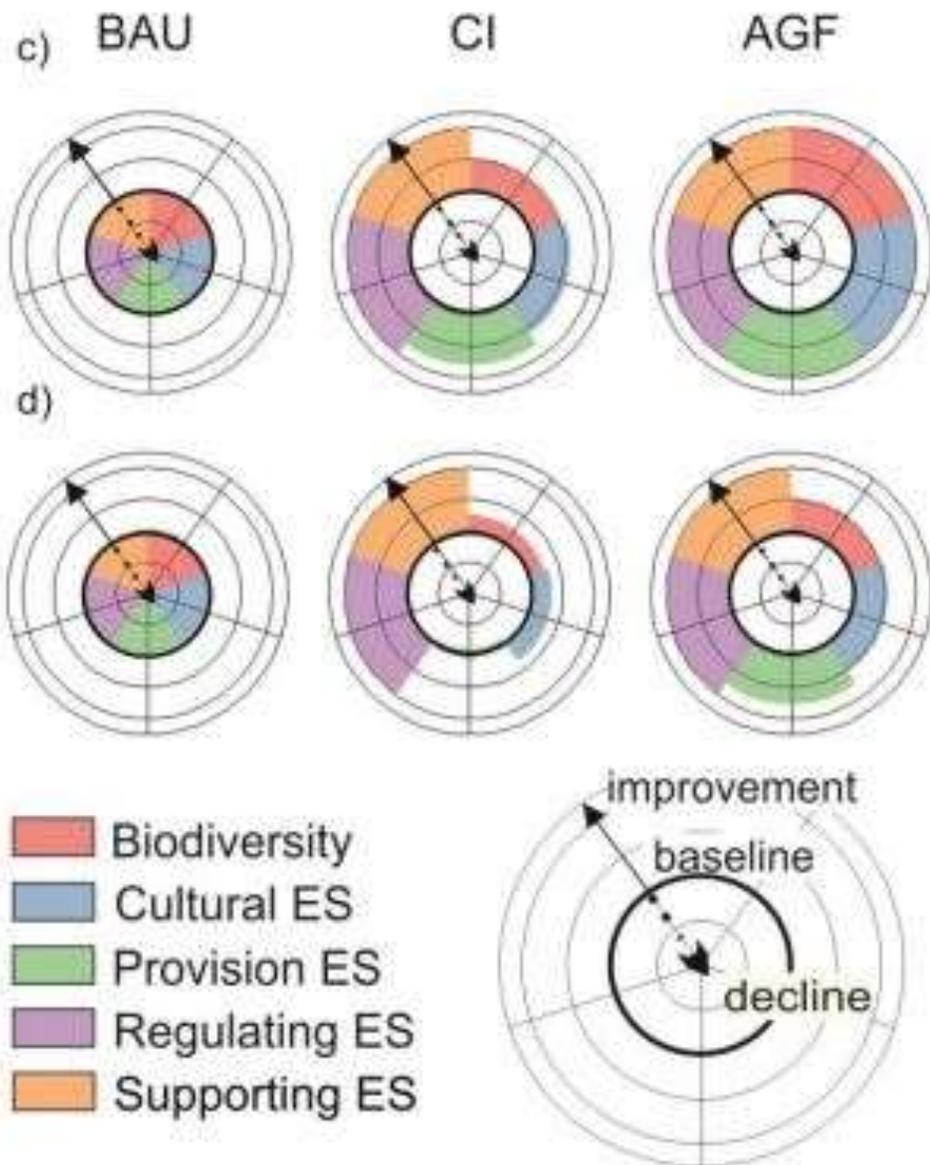

Denu et al., 2018 Bio Conser

Scenarios of land cover change at 2030 in the Jimma Highlands at business as usual (BAU, b), industrial coffee plantation (CI, c) and agroforestry with semi-managed coffee production (AGF, d) scenarios.

Qualitative assessment of changes in ecosystem services and biodiversity states expressed by different stakeholder groups under alternative scenarios in Jimma (c, academics and officers, d, men and women farmers; BAU = business as usual, CI = coffee industry, AGF = agroforestry scenarios, respectively). State changes were expressed as improved or depleted or equal compared to the baseline

Multifunctional agroforestry for enhancing biodiversity, improving livelihoods, and creating resilient landscapes in Ethiopian highlands

- 1) Generate evidence on biodiversity and resilience to climate change from traditional agroforestry systems;
- 2) Generate knowledge on how social drivers and climate change are affecting biodiversity in agroforestry systems;
- 3) Map and communicate the role of people's access, use, and relationships with highland agroforestry resources; and
- 4) Synthesize knowledge on what effective climate-resilient and biodiversity promoting traditional agroforestry systems already exist and can be scaled and or replicated.

Lessons learned will be used to create and scale up context-specific mosaic agroforestry systems across Ethiopia.

Diverse outreach: Policy, Film, Art

Mountain Social-Ecological Futures 2023-2026

Five Years of Action
for the Development of
Mountain Regions
2023-2027

Create an urgently needed community of practice to imagine and shape new responses to the ongoing unprecedented climate-driven social-ecological changes in mountain areas

New directions / challenges

- Integrate information to characterise socio - ecosystem dynamics at fine grain size.
- Map spatio-temporal rate and direction of changes in diverse landscapes – cities to HWC, landscape planning to interactions with changing climates, African Mountains to NYM.
- Apply the developing scenario approach to *integrate* environmental, ecological and social interactions such hydrology, biodiversity, carbon, people, health and livelihoods.
- Translation to Nat Capital assessment and co-design Nature Based solutions to get ahead of the challenges.
- Training and dissemination Conservation, Gvt, research and infrastructure
- Educational / learning process – the need to captures this better.
- Participants – who's voice is in the room.....
